

BENEATH THE SITE.

The rebuilt SuDS Enviro website. What is on it, how it looks, and where it goes next.

THE SITE IN SIX NUMBERS

11

PRODUCTS

in the RHINO catalogue, each with its own page

14

DATA SHEETS

drawn, on the site, printable to A4

27

3D MODELS

in the web-ready product library

8

STOPS

on the Water Journey, roof to river

4

PLOTS

in the Site Explorer, cut open

7

STEPS

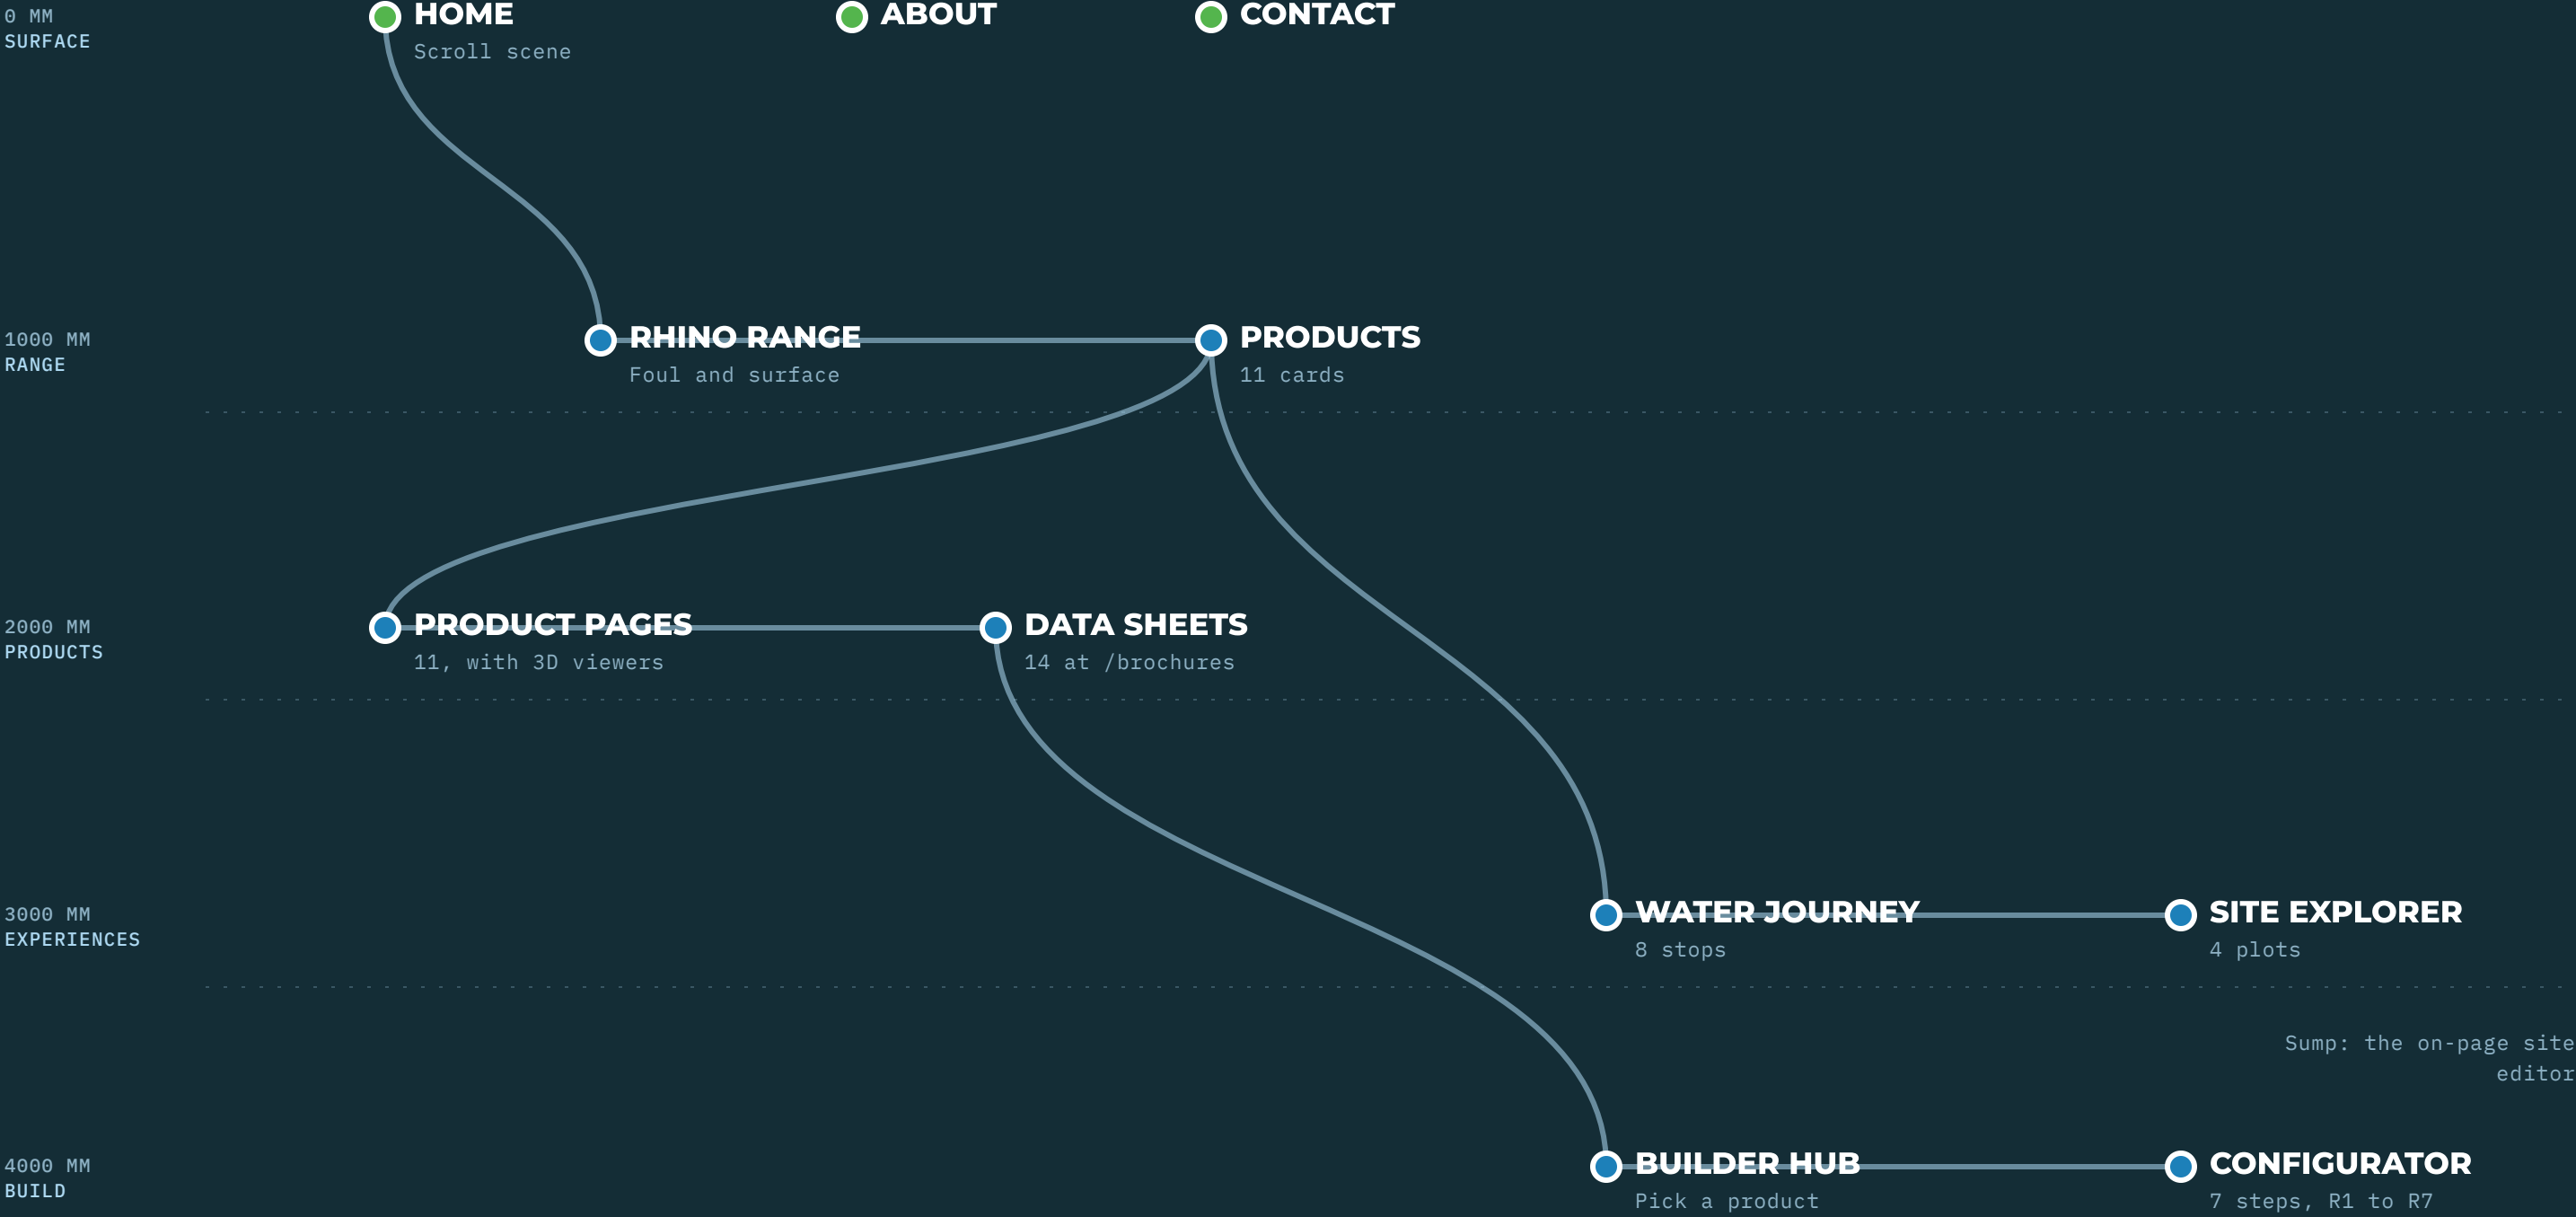

in the configurator, checked by seven rules

Counted from the repo: the product catalogue, /public/brochures, the 3D library manifest, and the page components.

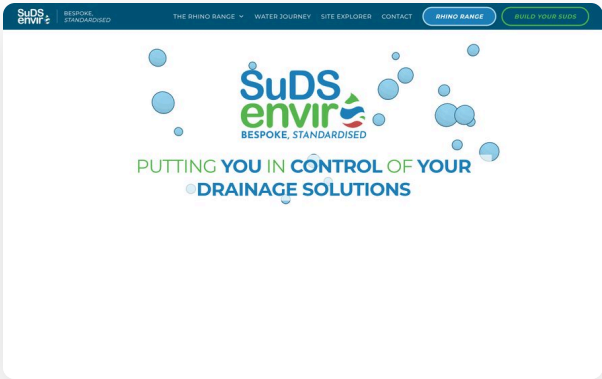

THE SITE MAP, DRAWN IN SECTION

EVERY PAGE AT ITS DEPTH.

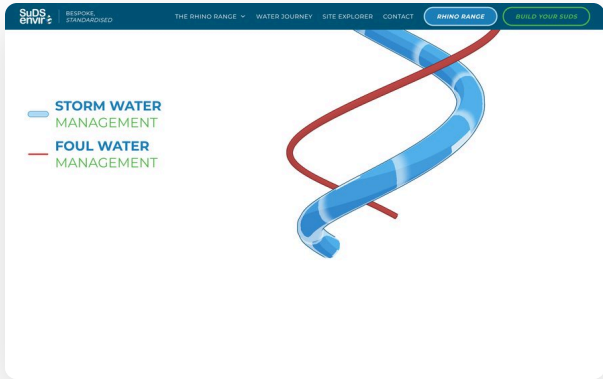

Surface pages above the turf line. The deeper you go, the more the page does for you.

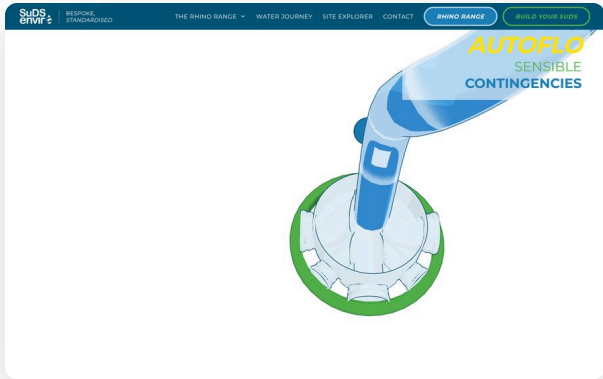

ONE STORM, SCROLLED.

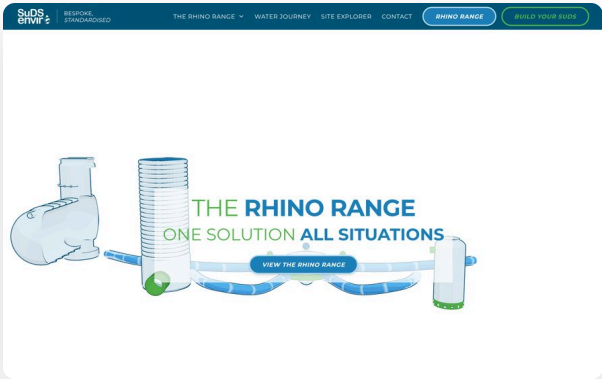

0 px

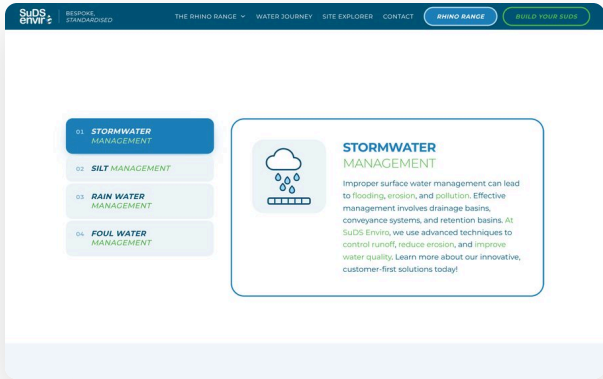

1100 px

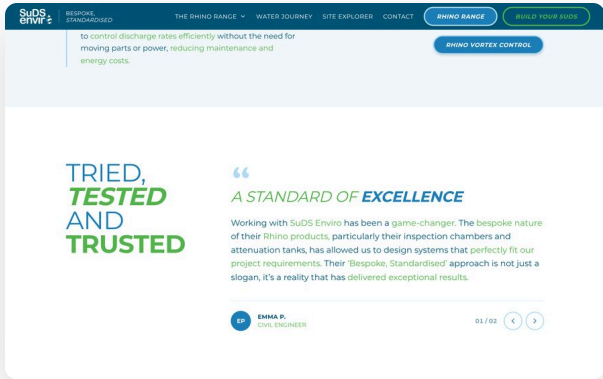

2200 px

3300 px

4400 px

5600 px

The home page is one scroll scene, rebuilt from the original Spline recording in the site's toon style: the drop and bubbles, storm and foul water pipes, the autoFlo device, then the RHINO range laid out on a line. Scrolling is the only control.

Phone, 390 px. The same scene, recomposed for a narrow screen.

ROOF TO RIVER.

01 RAIN

02 HARVESTING

03 CHAMBERS

04 SILT TRAP

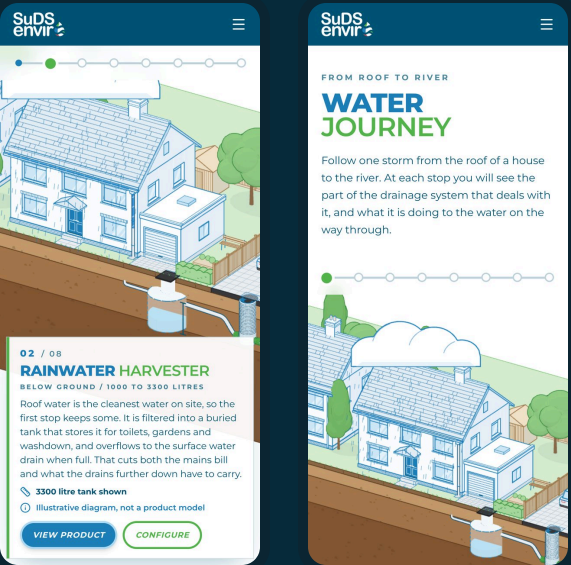

05 SEPARATOR

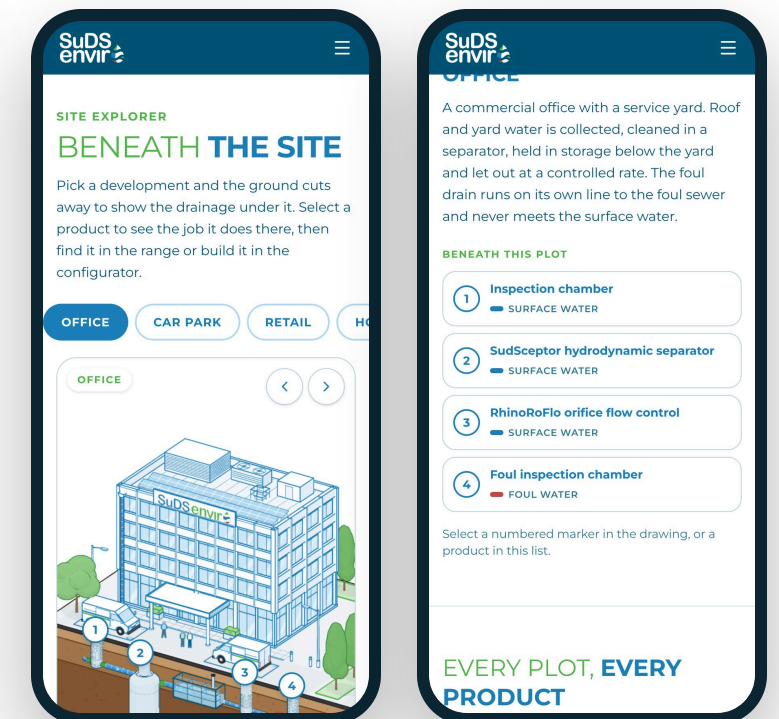

06 STORAGE

07 FLOW CONTROL

08 RIVER

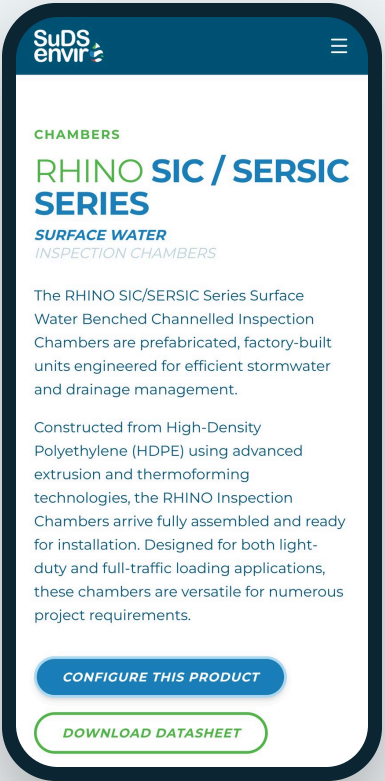

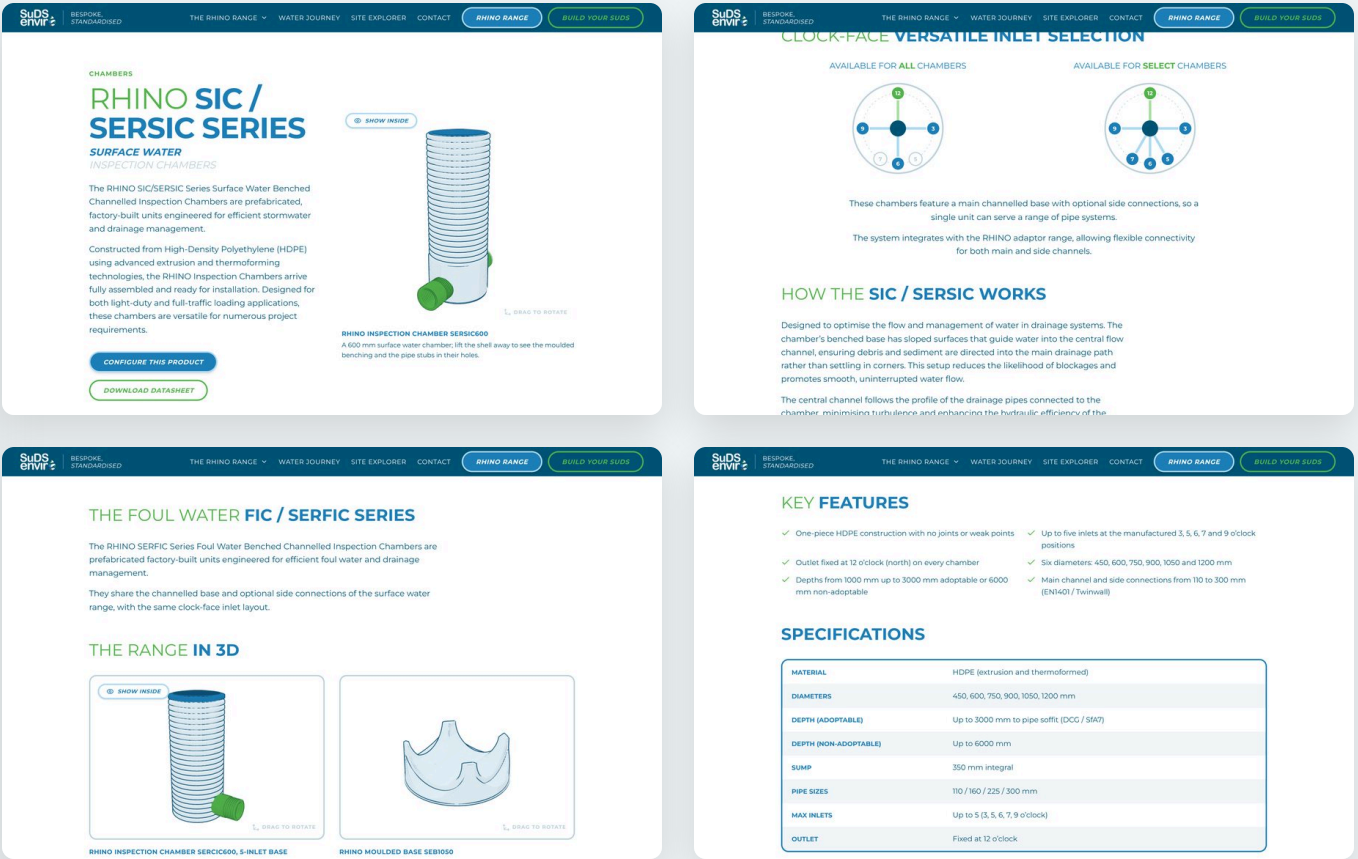

One house, one storm, eight stops. The camera follows the water through an isometric line-art section, and each stop opens the product that does that job, with a link to its page and to the configurator.

The brand book's cut through the ground, already live on the site.

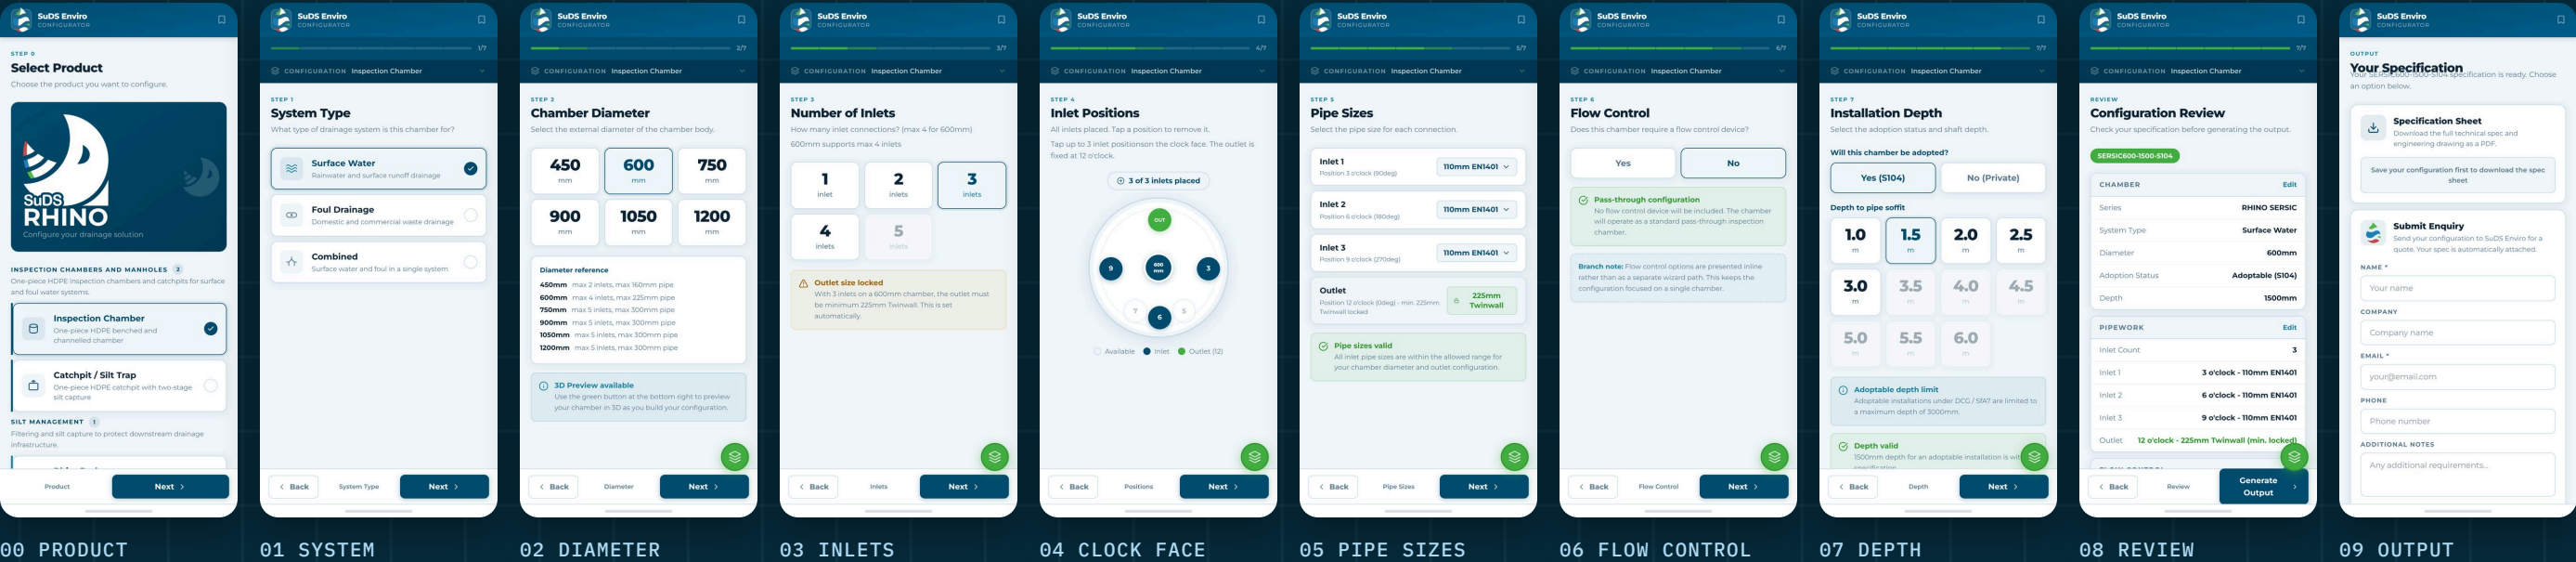

FIND IT. TURN IT ROUND.

The range splits by water: foul and surface. Each product page opens on a 3D model you can turn, built from SuDS Enviro’s own part files, then the clock-face inlet options, specification, compliance and the data sheet.

RHINO SIC / SERSIC on a phone.

SEVEN STEPS TO A DRAWN CHAMBER.

Phone first. Big targets, one decision a screen, Back and Next always in the same place.

Rules, not guesswork. Seven rules (R1 to R7) lock what is not allowed: inlet counts by diameter, the minimum outlet, adoptable depth.

A 3D preview and a drawn sheet. The chamber builds in 3D as you choose, and the output is a two-page specification with drawings.

Walked through at 390 px: inspection chamber, surface water, Ø600, three inlets at 3, 6 and 9 o'clock, 110 mm, no flow control, S104 at 1.5 m.

TOON 3D, LINE ART, ONE TYPEFACE.

RHINO INSPECTION CHAMBER SERSIC600
A 600 mm surface water chamber; lift the shell away to see the mouli

Toon-shaded, outlined and see-through, so the inside of a chamber reads as well as the outside.

THREE THINGS THE SITE TAKES NEXT.

01 FIELD FOR THE LIGHT VOICE

The light green heading words fail contrast on white. Field keeps the look and reads at every size.

02 THE GAUGE AS SCROLL PROGRESS

A thin staff gauge down the right edge of long pages, with a green marker at your depth.

03 REAL PHOTOGRAPHY

Replace the stock water images with the brand book's shot list. This frame is a direction image, not a finished photograph.

BUILT, IN REVIEW, WAITING ON YOU.

BUILT AND MERGED

- The rebuilt site on its root routes, merged in nine pull requests, September 2026
- 3D product library, toon scroll scene and product viewers
- Configurator with real parts, rules and spec sheet
- Water Journey and Site Explorer
- 14 redrawn data sheets
- On-page site copy editor

IN REVIEW

- Deployed to a Vercel preview. sudsenviro.com had not been switched over when last checked on 8 October
- The brand pack: book, logo suite, photography and film, in a draft pull request
- These two work packs

WAITING ON SUDS ENVIRO

- RHINO or Rhino, and SudSceptor or SuDSceptor
- One list of sales codes against drawing codes
- One green: #5BB44F or #54B54D
- Retire the old S-and-leaf mark
- A vector master of the stacked lockup
- Sign-off on the figures flagged in Redrawn

BESPOKE, STANDARDISED.

The water reaches the river cleaner and slower than it fell.
