

RHINO Septic

SEPTIC TANK

PRIMARY | SECONDARY | DATA SHEET

DRAFT - VERIFY BEFORE ISSUE

OVERVIEW

RHINO septic tanks are rotationally moulded HDPE tanks for primary and secondary wastewater treatment at properties without a mains sewer connection. They are designed for domestic and small commercial applications, discharging to a soakaway, drainage field or watercourse.

One-piece construction eliminates leakage risk, and the tanks are light enough to install without heavy plant. Integral dip pipes and internal baffles are moulded in, and the tanks suit variable ground conditions.

TREATMENT LEVELS

Primary: a gravity-based system with the septic tank connected to a drainage field.

Secondary: the septic tank with a sand filter or packaged treatment plant. Secondary treatment is required for discharge to a watercourse.

DESIGN COMPLIANCE

- BS EN 12566-1:2016 prefabricated septic tanks
- BS 6297:2007+A1:2008 drainage fields
- Environment Agency General Binding Rules
- Building Regulations Approved Document H2

APPLICATIONS

- Rural domestic properties without mains sewer
- Farm buildings and agricultural dwellings
- Holiday homes and lodges
- Small commercial premises in rural areas

DISCHARGE OPTIONS

SOAKAWAY

Discharge to a soakaway system

DRAINFIELD

Discharge to a drainage field or infiltration system

WATERCOURSE

Discharge to a river or stream; requires secondary treatment

No general arrangement drawing for this product is held in the SuDS Enviro drawing pack. Tank dimensions are confirmed at sizing.

FEATURES & BENEFITS

- One-piece HDPE, no leakage risk
- Primary and secondary treatment options
- Lightweight, installed without heavy plant
- Integral dip pipes and internal baffles
- Low maintenance, infrequent desludging
- Suitable for variable ground conditions

SPECIFICATION

Material	HDPE, rotationally moulded
Treatment	Primary or secondary
Sizing	Population equivalent (PE) and daily flow
Discharge	Soakaway, drainage field, watercourse
Installation	Below ground
Desludging	Annual recommended
Product code	SEP-[PRI or SEC]-PE[population]

CHOOSING TREATMENT AND DISCHARGE

DISCHARGE TO	PRIMARY TREATMENT	SECONDARY TREATMENT
Soakaway	Yes	Yes
Drainage field	Yes	Yes
Watercourse	No - secondary treatment required	Yes

Discharges must also meet the Environment Agency General Binding Rules for small sewage discharges, or hold a permit. Example product code: SEP-SEC-PE6 is a secondary treatment tank sized for a population equivalent of 6.

HOW TO SPECIFY

- TREATMENT LEVEL**
Choose primary or secondary treatment.
- POPULATION AND FLOW**
Enter the population equivalent (PE) and, if known, the daily flow in litres per day.
- DISCHARGE POINT**
Choose soakaway, drainage field or watercourse. A watercourse needs secondary treatment.
- SIZING AND QUOTATION**
Our team sizes the tank and confirms its dimensions for the project.

INSTALLATION AND MAINTENANCE

The tanks are light enough to be placed without heavy plant and suit variable ground conditions. Drainage fields are designed and installed to BS 6297. Desludging is recommended annually, subject to use.

COMPLIANCE

- BS EN 12566-1:2016
- BS 6297:2007+A1:2008
- EA General Binding Rules
- Approved Document H2

DRAFT - VERIFY BEFORE ISSUE

No official data sheet or general arrangement drawing for RHINO septic tanks is held in the SuDS Enviro drawing pack. Content is taken from the configurator product data and rule set. Confirm tank sizes, capacities and dimensions before issue.

SPECIFY A SEPTIC TANK

Tell us the population equivalent, treatment level and discharge point, and we will size the tank.
